

I recently learned that the inquires made through 'Contact Us' links were not getting through to my email inbox. Without going into overly boring technical detail, what happened was that the mail server was detecting the emails sent through 'Contact Us' link as spam and blocking them.

The problem has been fixed (hopefully) and I sincerely apologize if you messaged me and I never responded. I have no idea how long this problem had been ongoing, but it seems it may have been for a while now.

As always, you can email me directly at jason@meancatcoffee.com if it seems that my response is slow. Thanks
