

New Products Section !

As some of you may have noticed, I've added a [Products](#) section to the site. This section contains a small inventory of grinders, coffee brewing devices, and filters. I've used all the products on a daily basis at one time or another, so I am very familiar with how well they function. If you have any questions please feel free to [contact me](#)

. I've also posted an instructional video to go with each brewing device to help get you started.

I'm a huge proponent of taking a hands on approach to making coffee. This is because almost all of the electric coffee makers sold in stores are not very good at producing a cup of coffee the way it's meant to be made. Their limitations are either improper brewing times, or more often, improper brewing temperatures. If you have ever had a great cup of coffee at a coffee shop, but found the same coffee a bit lackluster when made at home then you will know what I'm talking about. By taking a little extra time and putting forth just a small amount of extra effort, you can be greatly rewarded by a vastly improved end product when making coffee. These products will aid you in your efforts to make a better cup of coffee.
